ThreatConnect

ThreatConnect for Security Leadership

Justify your security investment and demonstrate your team's efficiency with ThreatConnect

With ThreatConnect, you're able to automate and control your security operations out of one Platform, providing multiple benefits for your organization:

Detect and Respond to Threats Faster

Removing the friction caused by unnecessary human intervention allows processes to run much smoother. Automating workflows with ThreatConnect Playbooks will reduce detection and response times while ensuring each step is being followed the same way, everytime. Additionally, applying external threat intelligence during triage and investigation will allow for greater context around vulnerabilities.

Increase Analyst Efficiency by Automating Manual Tasks

By automating previously very manual tasks, you can empower your analysts to focus their attention on tasks that better serve their skillset. Finding information security professionals to fill jobs is hard enough. ThreatConnect enables task automation and decision-making orchestration with Playbooks.

Demonstrate Cost Control with Customizable Metrics

The savings seen when implementing automation can be seen through an ROI Calculator built into every Playbook. Customizable values tell you, based on how many times any given Playbook has been run, how much your organization has saved to date by implementing an automated workflow.

Quicker, More Efficient Onboarding

The faster individuals can be onboarded, the sooner they can be supporting the security goals of the organization. Unfortunately, the most time consuming parts of onboarding analysts is training on the specific products they will use. ThreatConnect enables the automation of many processes, oftentimes not requiring the analyst to spend time in other platforms to access things they need. With a built-in document repository, keep all pertinent documentation in one easily accessible spot.

An Example of ThreatConnect in Action:

At-A-Glance Reporting and Analysis with Dashboards

By configuring multiple dashboards, you have flexibility depending on current priorities, as well as the ability to easily share them with other stakeholders in your organization. Easily visualize data that shows the impact of your security efforts and gain a better understanding of the threats your organization faces. Monitor your security operations and intelligence in a way that is actionable and meaningful for you and your team. With customizable reports you can access the information you need in a digestible format.

Quickly view ROI data for instant look into cost savings

Add custom metrics based on data from inside and outside ThreatConnect

Keep track of open tasks and new notifications to stay aware of required actions

Easily evaluate your intelligence to determine priorities

Drag and resize dashboard cards to prioritize how you view information

Monitor all activity in one view for quick status checks
